

Health Insurance Portability and Accountability Act (HIPAA)

Protecting the confidentiality, integrity and availability of patient information is no longer just a best practice for healthcare organisations, but a legal requirement.

The Health Insurance Portability and Accountability Act (HIPAA) mandates that all healthcare organisations effectively meet Administrative procedures, Physical safeguards, Technical data security services, and Technical security mechanisms to protect the privacy of patient information, and maintain data integrity for employees, customers and shareholders.

Ecora Enterprise Auditor is not applicable to Physical safeguards which discuss how to limit physical access to systems and the facilities in which they are housed. Enterprise Auditor is, however, applicable to the three other areas.

Ecora's Approach to Best Practices

Ecora Enterprise Auditor automates the reporting of thousands of configuration settings across your enterprise. Providing you with timely reports for disaster recovery, change tracking, and security best practices that meet the requirements of HIPAA.

Don't do it manually – Learn to automate IT reporting

Enterprise Auditor can answer the following questions:

- Who has access to your systems?
- Who specifically has access to Share information?
- Where are there internal security vulnerabilities?
- What patch levels are we at?
- Are configuration changes being tracked and documented?
- What policies are changing within Active Directory?
- Can we show an audit trail?
- And many more out-of-the-box reports...

Ecora has documented '**The Seven Must-Have Security Reports**', which identifies great template reports for security best practices.
